

VolSnap

OpenTrace Toolchain

Command Line

- `./volsnap.exe C:\ path\snapshot 16 8`
- “C:\” is the target volume. “path\snapshot” is a relative path where the metadata is saved. This Path is auto excluded. “16” means 16 MB of buffer per thread. “8” is the thread count.
- `./volsnap.exe C:\ path\snapshot --extract`
- Extract the MFT for debugging.
- `./volsnap.exe C:\ path\snapshot --incremental`
- Filter records using timestamps.
- `./volsnap.exe C:\ path\snapshot --tag`
- Create Human readable version of the MFT
- `path\snapshot\config.json` can be use to configure file and folder exclusion.
