

VoIRNG

OpenTrace Toolchain

Command Line

- `./volrng.exe test Z: 100 --step`
- Create or open project name “test” using “Z:” as the mount point for the disk. Step with 100MB of test data. “test” is a relative or absolute path.
- `./volrng.exe test Z: --mount`
- Mount the “test” backing VHD data to “Z:”. Useful since volume is dismounted after each --step.
- `./volrng.exe test --dismount`
- Dismount after a mount.
- `./volrng.exe test somepath/to/restored_data --validate`
- Checks if the restored data matches the original data.

Partition and Format

NTFS
File System
